

**McLeod Aggregates Ltd aims to achieve outstanding performance in logistics management and to minimize the environmental and social impact of its transport operations. We strive for continual improvement and working towards more sustainable operating practices.**

**The construction materials industry essentially services local markets and the use of road transport is expected to continue to dominate in the movement of materials in the future.**

To achieve our aim of delivering products in the most sustainable way possible, we will:

- Look at the operational efficiency of the road vehicles used and aim at reducing under loading and increasing the average size load.
- Encourage the use of larger vehicles to reduce the environmental impact per tonne carried.
- Work to optimize mileage travelled.
- Work in partnership with local communities and stakeholders whilst being a responsible neighbour.
- Enhance environmental awareness of employees and contract hauliers through structured training.
- Meet all legal compliance requirements, regulations and standards associated with transport operations.

Neil McLeod
